

Astor Services for Children & Families promotes the well-being of children, adolescents and their families through a range of programs.

Care Management

Care Management links, supports, and oversees access to community services a child and family may need to improve overall health. Your family works with a single care coordinator who brings together the best quality services needed to build a brighter future for your child. We facilitate communication between you, medical staff and social workers assisting in navigating the healthcare and human service maze. We provide compassionate and individualized care for your family while combining all your services into one clear and simple plan. Your care coordinator is your family's constant ally in your efforts to achieve lasting wellbeing, prevent health crises and pave the way for success.
